

# Instructions for wear checks of play equipment

The equipment must be checked for correct operation and safety, especially the points listed below:

Proof of maintenance

**Playground** .....

**Date of installation** .....

Checks depend on the type of equipment. Any equipment with moving parts must be checked at least twice a year, static equipment at least once a year.

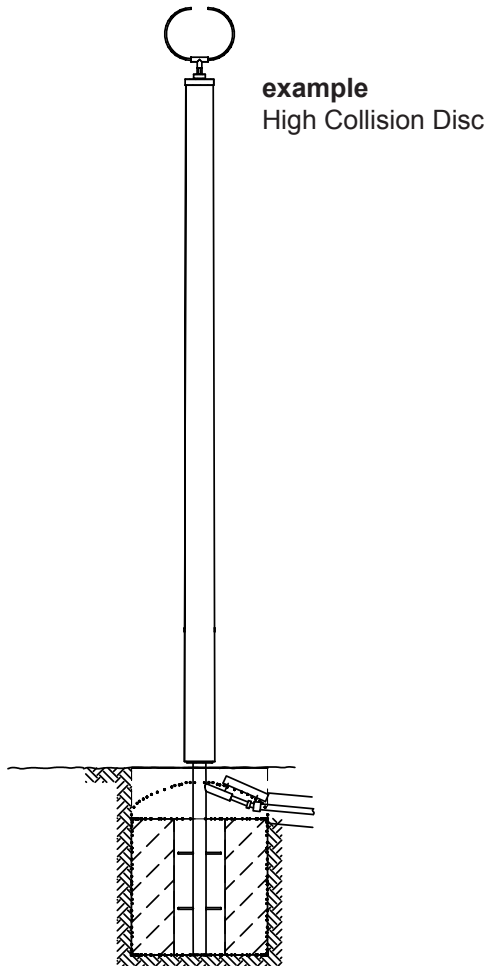

Intervals for maintenance work and checks generally depend on

- location
- kind of use
- frequency of use
- possible vandalism

For more details see also "General instructions for maintenance of playgrounds".

## Forest Fountain

Masts made of wood or made of stainless steel with Jets and Rotors  
**Order No. 5.27031 - 5.27037 wood**  
**Order No. 5.27531 - 5.27537 steel**

Check the stability of the masts and check that jets and rotors are securely connected (twice per year).

To avoid jets and rotors becoming deformed and damaged always handle them by the hexagonal nuts and flattenings provided and use suitable spanners.

The water-lubricated rotor bearings are made of plastic.

If clogged, jets and rotors can be removed and cleaned.

The connections come equipped with flat gaskets.

Usually, the connectors are located at a height of about 4 m so that a big double ladder is needed for access.

Prior to the period of frost, it is imperative the pipes in the masts as well as the supply lines be drained. This is usually done by opening the tube fitting in the pump chamber.

Special notes, e.g. for repairs

Repair not carried out, it is still possible to play on equipment

Repair not carried out, equipment is taken out of action

All work carried out, everything is in order

Maintenance carried out by:

..... Date .....
