

CHRISTIE

CC2 Cooktop barbecue hood

The Christie barbecue hood has numerous benefits beyond protecting the cooking surface from dirt. Sturdy and durable, we designed it to complement the functionality and performance of our industry-leading cooktops.

KEY FEATURES:

- Tough, durable Glass Reinforced Nylon handle remains cool to the touch at all times
- Soft close hinges and rubber bumpers for quiet operation and reduced wear and tear
- Heat reflective inner aluminum panel improves cooking efficiency by up to 25%
- Dual skin insulation prevents outer panel from reaching harmful temperatures
- 95 mm - 55 mm clearance allows for cooking with the hood down, trapping heat and flavour
- Corrosion resistant aluminum alloy hinges, tested to over 20,000 cycles
- Prevents water from entering the waste container when barbecue is not in use, reducing cleaning and maintenance costs
- Stainless steel, aluminium, and nylon construction for ultimate durability
- Mounting bracket available for retro-fit to CC2 Cooktop models only

Constant torque hinges hold the hood open, allowing seated users of all abilities to open and close the hood during the cooking process.

The curved design and recessed cooking surface create ample clearance to cook with the hood down. Trapping radiant heat reduces power consumption, allowing you to cook faster, and enhances the flavour of the meal.

The sleek stainless steel outer surface is easy to clean, while the inner aluminium panel reflects heat to the food on the grill plate during cooking. Reflecting radiant heat this way improves the overall cooking experience and keeps the outer surface of the hood from reaching harmful temperatures. You can safely touch the hood during any stage of the cooking cycle.
